📄 Stage 1: Requirement Gathering Guide

Capstone Project – ReadNRevise

📌 Introduction

Welcome to Stage 1 of your Capstone Project.

This stage focuses on **Requirement Gathering**, which is the foundation of any successful software project.
Before writing a single line of code, you must clearly understand:

- What problem you are solving
- Who the users are
- What features are required
- What the final outcome should look like

A well-prepared requirement document ensures smooth development and faster approval.

🎯 Objective of Stage 1

By the end of this stage, you should:

- Clearly define your project idea
- Identify the target users
- List all core features
- Define project scope
- Prepare a structured Requirement Document (PDF/DOC)

📂 What You Need to Submit

You must upload a **Requirement Document** containing the following sections:

1️⃣ Project Title

Provide a clear and meaningful title for your project.

Example:
“Smart Task Management System for Students”

---

2 Problem Statement

Explain:

- What real-world problem does your project solve?
- Why is this problem important?

Keep it clear and specific (5–10 lines).

---

3 Target Users

Mention:

- Who will use this system?
- Students? Teachers? Admin? Companies?

Example:

- Students
- Admin Panel Users
- Recruiters

---

4 Project Scope

Clearly define:

- What your project WILL do
- What your project WILL NOT do

This prevents scope confusion during development.

---

5 Core Features (Mandatory)

List minimum 5–10 features.

Example:

- User Authentication (Login/Signup)
- Dashboard
- Profile Management
- CRUD Operations
- Search & Filter
- File Upload
- Role-based Access

Be specific and structured.

---

6 Technology Stack

Mention the technologies you plan to use:

Example:

Frontend:

- React / Next.js

Backend:

- Node.js / Spring Boot

Database:

- PostgreSQL / MongoDB

Other Tools:

- GitHub
- Trello

---

7 Basic Workflow

Explain how your system will work step-by-step.

Example:

1. User signs up
2. User logs in
3. User creates task
4. Admin reviews data

Keep it simple and logical.

8️⃣ Future Enhancements (Optional)

Mention features that can be added later.

Example:

- AI recommendations
- Mobile App version
- Real-time notifications

📄 Document Format Guidelines

- Format: PDF / DOC / DOCX
- Clear headings
- Proper alignment
- No spelling mistakes
- Minimum 2–3 pages
- Professional formatting

⛔ Common Mistakes to Avoid

❌ Writing vague descriptions
❌ Copy-pasting from internet
❌ No feature clarity
❌ Missing sections
❌ Unclear scope

✅ Approval Criteria

Your document will be approved if:

✓ All required sections are present
✓ Features are clearly defined
✓ Project idea is feasible
✓ Document is structured professionally

Once approved, you will unlock **Stage 2: Backlog Creation**

📌 Important Note

This document acts as the foundation of your Capstone Project.
Poor requirement gathering leads to project confusion later.

Take your time. Think clearly. Write professionally.

🚀 Best of Luck!

Prepare your requirement document carefully and submit it for approval.

Your journey towards becoming an industry-ready developer starts here.
